WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

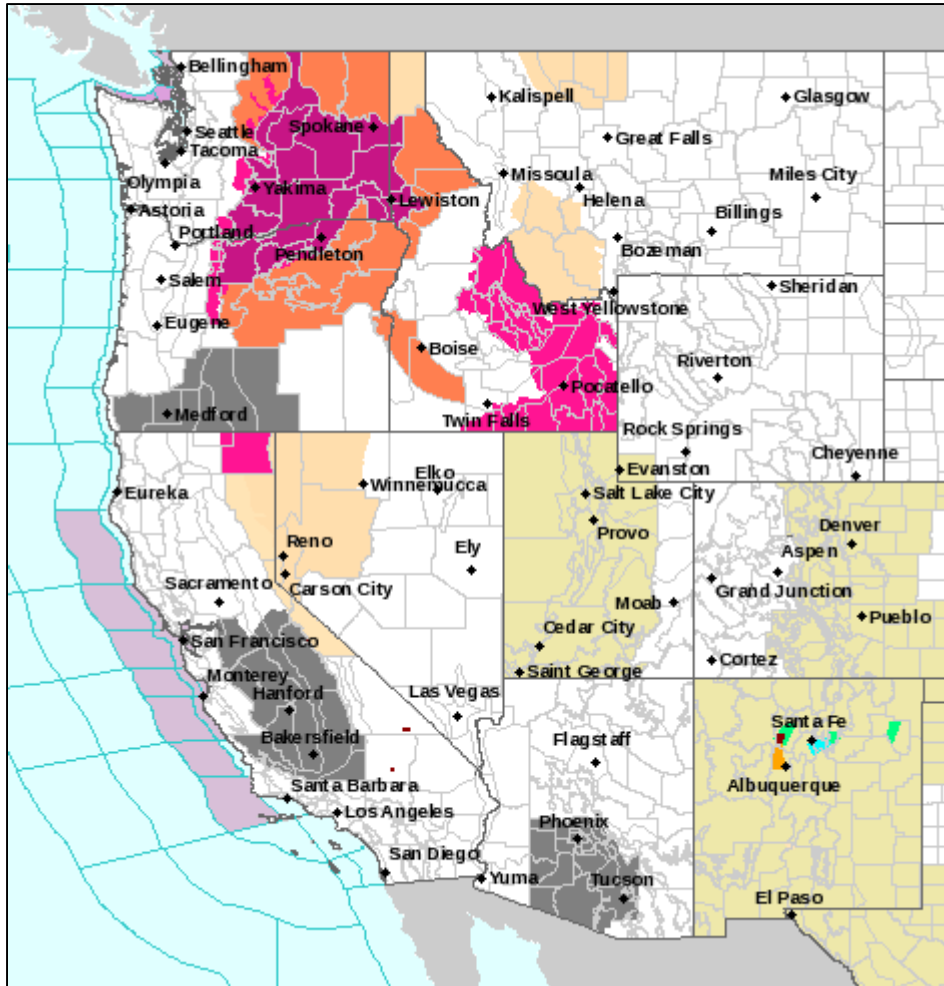

There will be little change in the weather today as strong high pressure remains over the West Coast. Maximum temperatures will be 5 to 10 degrees above normal, with mid 80s to mid 90s in the mountains and mid 90s to around 105 in the valleys. Minimum humidity will be mainly in the upper single digits and teens with nighttime humidity recovery between 30% and 50% across the interior. Gusty SW to NW winds of 15 to 25 mph will surface through the canyons and passes of the coastal mountains into the western part of the Sacramento Valley this afternoon and evening. The ridge of high pressure will weaken Wednesday through Friday causing these winds gusts to increase to 20 to 30 mph. Also, there will be SW to W wind gusts of 20 to 30 mph east of the Cascade-Sierra Crest Wednesday through Friday. Temperatures will cool a few degrees Wednesday through Friday as the ridge weakens, but temperatures will still be near to a little above normal. Minimum humidity will stay in the upper single digits and teens across the interior, but there will be a little improvement in nighttime humidity recovery. A trough will drop down from the Pacific Northwest bringing below normal temperatures and a slight increase in afternoon humidity Saturday through early next week. Gusty westerly winds east of the Cascade-Sierra Crest and through the gaps in the coastal mountains will increase some more and a High Risk may need to be extended.

SOUTHERN CALIFORNIA

A few showers and wet thunderstorms will be possible over the high desert and San Bernardino National Forest (N.F.) early this morning before this activity ends shortly after sunrise. The rest of the day will see more widespread showers and thunderstorms due to an increase in stability. Expect scattered wet storms to develop by noon over the Sierras eastward into the Inyo NF as well as most of the deserts. Early in the afternoon hours, scattered storms are expected to redevelop in the San Bernardino and Cleveland National Forests. Due to the storms westward movement, a few storms may reach the Angeles N.F. as well as the urban areas of Riverside and San Diego Counties by late afternoon. All storms will be capable of producing brief heavy rain. After today, monsoonal moisture will retreat from the area, resulting in fewer storms. By Thursday and Friday, all activity should be limited to the high Sierras. Temperatures this week will change little with highs remaining in the upper 90s to 104 in the valleys to 110-115 in the low desert. Minimum RH will be high over the deserts and Southern California, but the inland valleys of the central coast as well as the Sierra Foothills will continue to see readings in the 8-15% range for 4-6 hours each afternoon. This weekend, a slow cooling trend will begin as onshore flow strengthens across the region. Afternoon sea breezes will increase across the desert interface areas and central coast late this week into the weekend. Otherwise, winds will be light throughout the period.
